

## Release Notes

v.2.20.0 v. 2.20.2 v.2.20.3

iChannel Banner .....	3
Global Search Field .....	3
Documents (Files) Viewable in the Submitted   Requested File Areas .....	3
File Area – Request Docs .....	4
Portal Login Screen – Mobile Friendly .....	4
Contacts – Exporting to Excel .....	4
File Area – Unable to Delete Multiple Documents in One Action (To Be Deleted) .....	5
Collaboration on a Document in the Request Grid .....	5
iChannel Bugs and Enhancements .....	9
Client Detail: New Delete Entity button (System Admin Only) .....	16
File Area – Unable to Delete Multiple Documents in One Action .....	16
Session Validation – Web API Request (System Admin Only) .....	17
Custom Notification Emails .....	17
iChannel Splash Page .....	17
Security Groups – New Security Permissions .....	17
Contacts Search – Filter Entity Search .....	18

## iChannel Banner

The iChannel Banner will now have a more cohesive look and feel. Previously, users could experience Modules on the Banner encroaching on the Conarc iChannel logo in the middle of the banner. In addition, the **Search** and **iChannel Menu Icons** have a new design.

## Global Search Field

When a User performs a search in the **Global Search** field, the search field entries are not being removed from the previous search to allow for a new search. *Previously* if a user wanted to perform a new search, the User would first need to *manually clear* out the previous search entry or the word "Search" in the field.

To improve the User's experience, now when a user clicks in the search field, the previous search entry is removed, and the search field is cleared so a user can begin a new search.

## Documents (Files) Viewable in the Submitted | Requested File Areas

*Previously*, when multiple documents would appear in both the **Submitted** and **Requested Files** section of the **File Area**, the File Area would decrease in size to support the display of the Submitted and Requested File sections.

Now when a User accesses the File Area, Users will no longer see a decrease in the File Area section as all sections (Submitted, Requested, and File Area) will adjust to support the display equally. This enhancement will provide a better end-user experience when searching and/or accessing files.

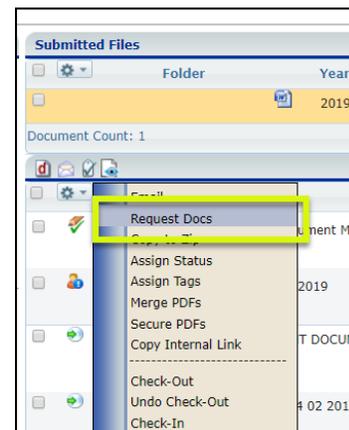

Users still have the option, if necessary, to use either the **Collapse (Hide)** or **Expand (Show)** feature to display as much or as little of these file areas.

## File Area – Request Docs

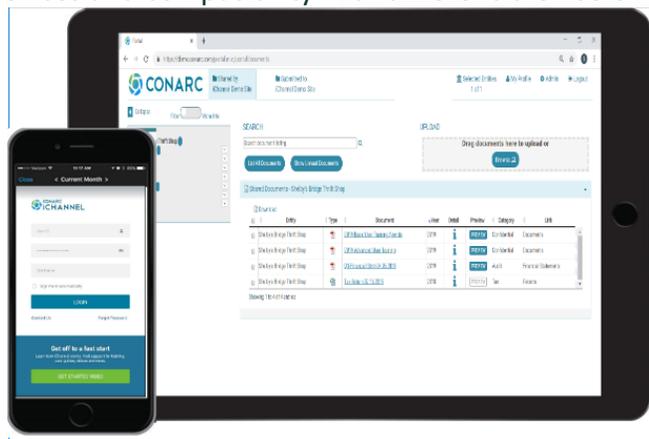

Some User's might have experienced when selecting the **Gear Icon** not able to see the **Request Docs** feature from the **Action List**. In a previous release, the Request Docs feature located in the Gear Icon action drop-down list, was inadvertently removed.

In this release, the Request Docs feature is now visible on the Action List when you select the Gear Icon.

## Portal Login Screen – Mobile Friendly

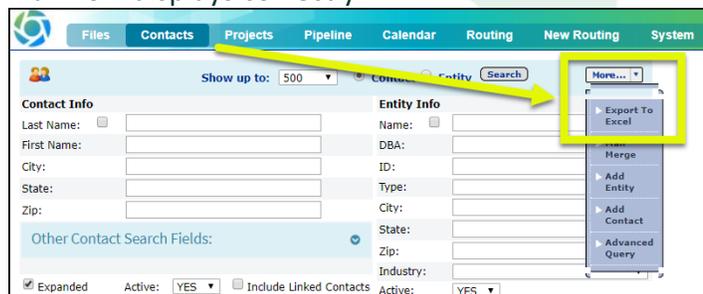

**iChannel Portal** login site has been enhanced to be more responsive when working with different mobile devices and compatibility with different browsers.

## Contacts – Exporting to Excel

When accessing **Contacts > Menu > Export to Excel** feature on the **Contact** page, a User or System Administrator could experience when exporting your contacts list to Excel, the data wasn't displaying correctly in the columns and/or incorrect data in those columns.

To improve the User's experience, now when you select **Export to Excel** from the Contacts page the data within all now displays correctly.

## File Area – Unable to Delete Multiple Documents in One Action (To Be Deleted)

System Administrators or an Identified User at your organization who have the responsibility to clean up the **File Area** with documents that have been **Marked for Deletion**, *previously*, iChannel was limited to the number of documents that could be deleted at once using the Delete feature.

To improve the User’s experience, there is no limited to the number of documents that can be Delete when documents are identified as **Marked for Deletion**.

## Collaboration on a Document in the Request Grid

Clients can now collaborate on a document that is in the **Request** grid (a document that is not yet Accepted and Published). All documents in the grid can be collaborated on, even those existing before upgrading to this feature, by Locking and Unlocking the document.

Here is how a Portal User would interact with collaborating with a document.

### Portal User Experience

- 1 Portal User upload a document(s) to the Portal site as usual.
- 2 The Requested Documents displays. The REPLACE button is now called EDIT.
 

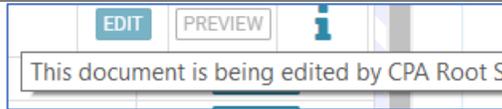

The screenshot shows a table with columns: Entity, Activity, Request, Due Date, Status, Notes, and Upload. A document is listed with Entity 'MargaRitas Cantina', Activity 'Test Activity Menu2', Request 'Item111', Due Date '2/6/2019', Status 'Pending', and Notes 'This note should appear'. The 'Upload' column contains an 'UPLOAD' button. Below the document name, there is a file path and an 'EDIT' button, a 'PREVIEW' button, and an information icon.
- 3 If portal user *clicks* **EDIT**, the document is streamed to the user and the document becomes locked, meaning an internal user cannot edit it. The EDIT button changes to REPLACE.
 

There is also an **UNLOCK** button if the user decides not to make any changes.

The screenshot shows a toolbar with four buttons: 'REPLACE', 'UNLOCK', 'PREVIEW', and an information icon 'i'.
- 4 When document is ready to be sent back, the User *clicks* **REPLACE** which will replace the document and unlock the document. The **EDIT** button will now display.
 

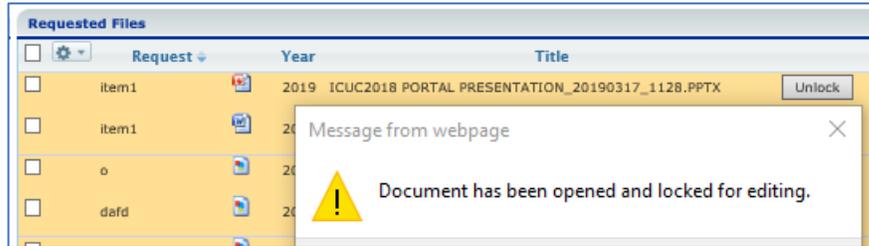

The screenshot shows a toolbar with three buttons: 'EDIT', 'PREVIEW', and an information icon 'i'.
- 5 If the document is currently being edited by an internal User, the EDIT button will be disabled.

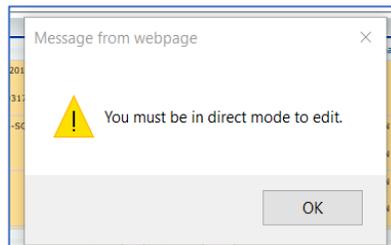

## Internal User Experience

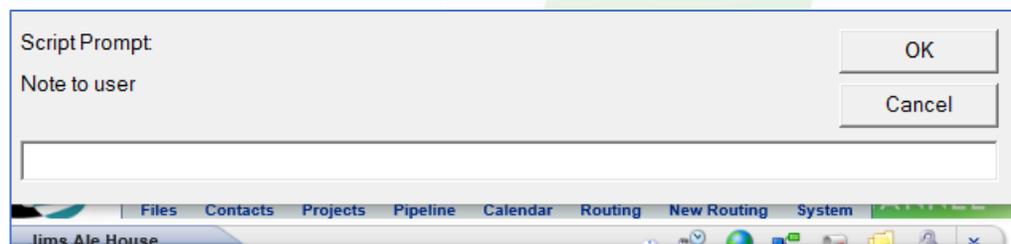

- 1 Requests will have an **Edit** button to the right of the Document name.
- 2 When the internal User *clicks Edit*, the document opens in “*Direct Mode*” for editing. The edit button will change to say **Unlock**.

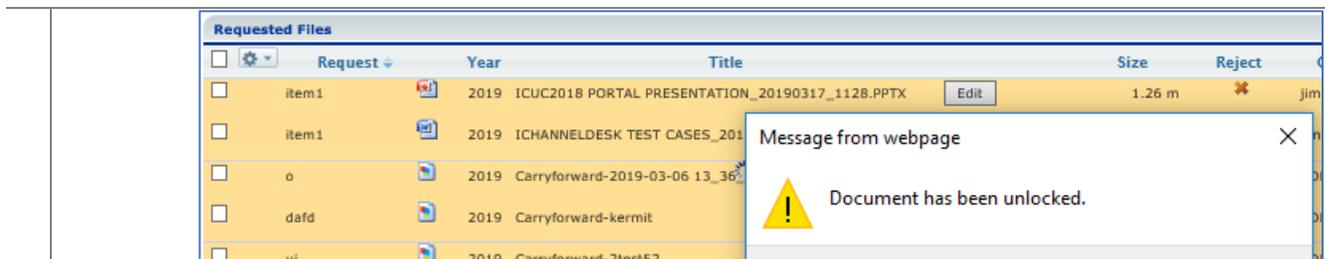

If the User is not in “*Direct Mode*” or in Chrome without iChannelDesk running, the User will receive a pop-up message.

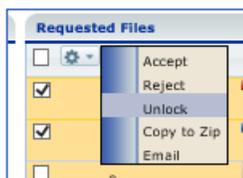

- 3 After the document has been changed and saved, the User *clicks Unlock*. A prompt will appear so a message (optional) can be included in the email sent to the relevant portal User(s). (Currently, this is a simple JavaScript prompt but can be upgraded to JQuery dialog or Bootstrap modal).

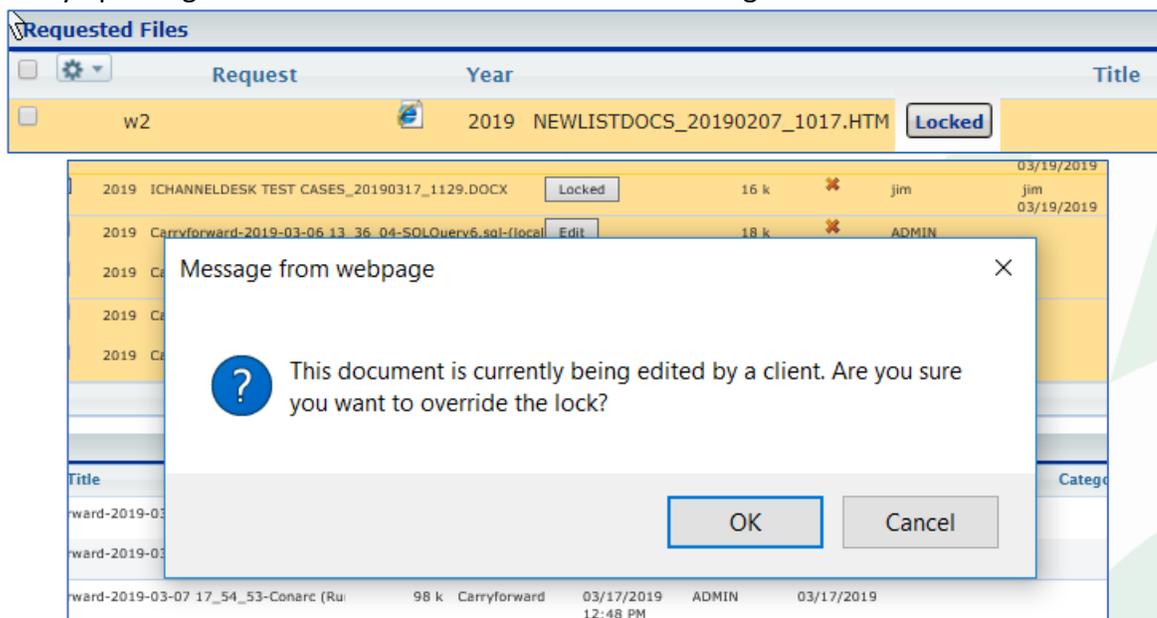

The button returns to **Edit**, and the document is unlocked, now the document can be edited by both the internal and external users.

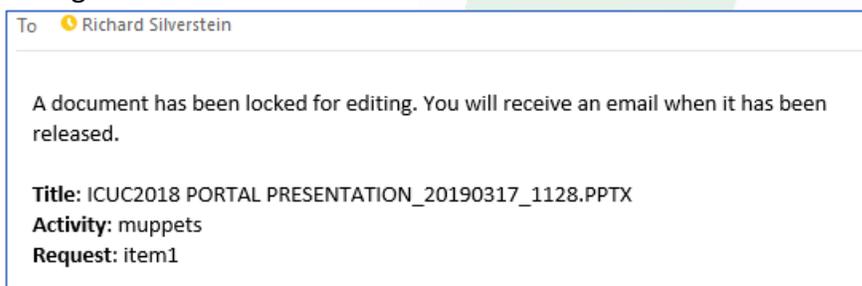

4 Multi-document unlock is available.

5 If the document is currently being edited by the portal user, the **EDIT** button would instead say **LOCKED** but will still be enabled. If *clicked*, a warning message will appear that the user is currently updating the document and will unlock if confirming.

6 The Portal User will get an email when documents are **Locked**.

Or **Unlocked**

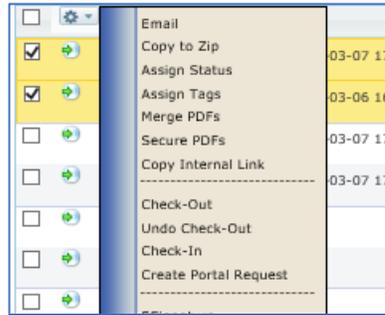

To Richard Silverstein

A document has been unlocked.

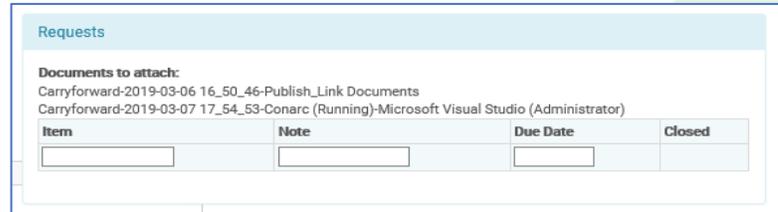

**Title:** ICUC2018 PORTAL PRESENTATION\_20190317\_1128.PPTX  
**Activity:** muppets  
**Request:** item1

**Message:** this is a note

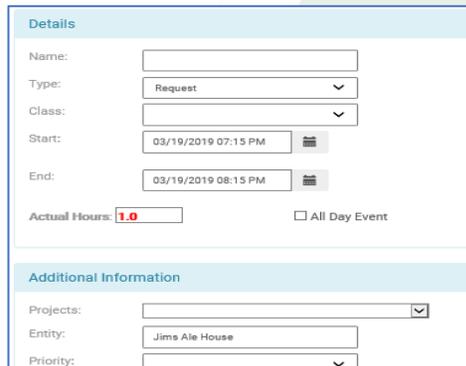

7 The internal user can also start a **Request with document(s) attached** to the requestor by selecting one or more documents and choosing **“Create Portal Request”** from the gear menu.

8 Choosing this option will take the user to the **Activity** page to create the new request. The document titles will be listed.

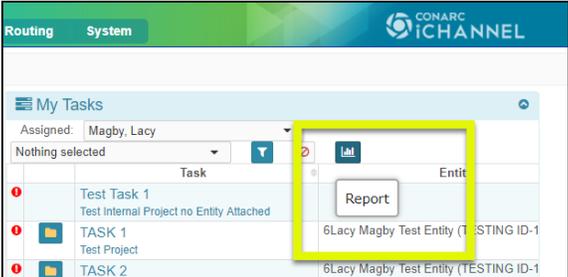

The NEW request type “Request” and the Entity are pre-selected.

9 The user will enter the **Activity name, Item, Note, and Date**. Only one request can be created when there are documents to attach. Thus, the **Add** button is gone. Once the request is created, the Request grid will refresh showing the new document.

## iChannel Bugs and Enhancements

iChannel Bugs and Enhancements																																						
1	<b>Disabled Editable Dashboard</b> keep showing on the dashboard drop-down list.	Resolved																																				
2	<p><b>Project Reports</b> feature. When <i>selecting Reports</i> from the <b>My Project</b> widget, iChannel Reports was displaying <i>an error has occurred during report processing</i>.</p> 	Resolved																																				
3	<p><b>Uploading Documents</b> – iChannel had been issuing an error on specific request types in the Client Portal. The following table displays when an error was thrown and against Request Status:</p> <table border="1" data-bbox="331 978 1187 1402"> <thead> <tr> <th>Request Status</th> <th>Request Expired (Yes/No)</th> <th>Allows to upload documents to request</th> <th>Gives Error1 (as shown in attachment)</th> </tr> </thead> <tbody> <tr> <td>Accepted</td> <td>No</td> <td>No</td> <td><b>Yes</b></td> </tr> <tr> <td>Rejected</td> <td>No</td> <td>Yes</td> <td>No</td> </tr> <tr> <td>Incomplete</td> <td>No</td> <td>Yes</td> <td>No</td> </tr> <tr> <td>Outstanding</td> <td>No</td> <td>Yes</td> <td>No</td> </tr> <tr> <td>Accepted</td> <td>Yes</td> <td>No</td> <td><b>Yes</b></td> </tr> <tr> <td>Rejected</td> <td>Yes</td> <td>No</td> <td><b>Yes</b></td> </tr> <tr> <td>Incomplete</td> <td>Yes</td> <td>Yes</td> <td>No</td> </tr> <tr> <td>Outstanding</td> <td>Yes</td> <td>No</td> <td><b>Yes</b></td> </tr> </tbody> </table>	Request Status	Request Expired (Yes/No)	Allows to upload documents to request	Gives Error1 (as shown in attachment)	Accepted	No	No	<b>Yes</b>	Rejected	No	Yes	No	Incomplete	No	Yes	No	Outstanding	No	Yes	No	Accepted	Yes	No	<b>Yes</b>	Rejected	Yes	No	<b>Yes</b>	Incomplete	Yes	Yes	No	Outstanding	Yes	No	<b>Yes</b>	Resolved
Request Status	Request Expired (Yes/No)	Allows to upload documents to request	Gives Error1 (as shown in attachment)																																			
Accepted	No	No	<b>Yes</b>																																			
Rejected	No	Yes	No																																			
Incomplete	No	Yes	No																																			
Outstanding	No	Yes	No																																			
Accepted	Yes	No	<b>Yes</b>																																			
Rejected	Yes	No	<b>Yes</b>																																			
Incomplete	Yes	Yes	No																																			
Outstanding	Yes	No	<b>Yes</b>																																			
4	<b>iChannel Version not Display</b> – after the 2.14.1 release, the <b>iChannel Version</b> info no longer displayed at the bottom of the application when accessing iChannel in IE or Edge. The iChannel Version was showing when using Chrome or Edge. iChannel Version now displays across all browsers.	Resolved																																				
5	<p><b>Email content when a document is unlocked</b> – When creating a portal request for a document, <i>select</i> the <b>requested document</b> in the <b>Requested Files</b> area. Next, <i>click Gear Icon</i> and <i>select Unlock</i>. A confirmation message will display.</p> <p>The <i>confirmation message</i> shows an incorrect email Subject message with no content in the email.</p>	Resolved																																				

6	<p><b>Project Status Drop-down Not Filtering</b> – some clients that have customized Project Status types for different Project Types where experiencing unexpected filtering results when <i>selecting a Project Type</i> and <i>selecting a Project Status</i>. iChannel now cross-references on the filter options from the Project Types and Project Status Types to ensure accurate results.</p>	Resolved
7	<p><b>Login to Manage Extranet (Portal)</b> – access a Subscriber, select the “green arrow”  from the UserID list. Expected result was to navigate the user to the Extranet (Portal); actual result was the User was redirected to the Dashboard.</p>	Resolved
8	<p><b>My Project widget   Task List</b> – in the My Project widget, expand the Task icon to display the list of tasks associated with a Project. Next, click Project Name to open project detail page.</p> <p><i>Close the Project, you will return to the Dashboard. Try to expand the Task icon to display the list of tasks associated with the Project. Your “expand Task” feature is disabled.</i></p>	Resolved
9	<p><b>IC Emails: Sent Emails not displaying</b> – there was an issue when Users were not seeing emails sent when using the <b>Gear Icon &gt; Email</b> feature.</p> <p>To add a new line of the message in <b>team</b> room, we could press + <b>Enter</b> keys</p>	Resolved

59	<b>File Area – Request Document   Site name is appended under the signature when sending emails to request document for submission</b> – site name is now displaying based on the site the document request is performed.	Resolved
60	<b>File Area – Secure link download count not correctly displaying</b> – the count is now displaying based on the secure link.	IC-4560
61	<b>Dashboard – Selected default dashboard not loading on v2.20, unable to delete previously created dashboard</b> – software fix to resolve	Resolved
62	<b>File Area – Users experienced to able to view Document History</b> - if the CRM security is disabled Vfp version of SecurityRightsManagerProvider used.	Resolved
63	<b>iChannel Portal – Notifications not sent when internal user switches to portal and uploads.</b>	Resolved
64	<b>iChannel Portal- Request Documents Drag and Drop option was not working in IE</b>	Resolved
65	<b>Global View Entity permission is enabled and entity search result displays as 0 records and cannot view entity details</b> - Actual Result: Error: You do not have permission to view this entity message displays for the search result. Expected Result: When the global view entity permission is given this entity details should be visible to the user.	Resolved

66	<p><b>Security   Activities are not displayed on the Calendar page when users has enough permission to view.</b></p> <p>RESOLUTION          Activities which user has access will be displayed based on following rules.          If there is no entity or project associated with activity → Activity Visible          If user has access to associated entity → Activity Visible          If user has access to the entity of associated project → Activity Visible          If user has no access to associated entity or entity of associated project → Activity Not Visible</p> <p>Further the contacts of the activity being displayed also contains only from the entities which user has access too.</p> <p>The entity of the activity is displayed without any restriction. In the case #3, though user has access to project entity, no access to the activity entity. In this scenario entity name will be displayed, however when entity link clicked, not allowed to view the entity.</p>	Resolved
67	<p><b>Users where encountering a message in iChannelDesk were no files found when opening the Open window.</b></p>	Resolved
64	<p><b>iChannel Portal- Request Documents Drag and Drop option was not working in IE</b></p>	Resolved
65	<p><b>Global View Entity permission is enabled and entity search result displays as 0 records and cannot view entity details - Actual Result:</b> Error: You do not have permission to view this entity message displays for the search result. <b>Expected Result:</b> When the global view entity permission is given this entity details should be visible to the user.</p>	Resolved
66	<p><b>Security   Activities are not displayed on the Calendar page when users has enough permission to view.</b></p> <p>RESOLUTION          Activities which user has access will be displayed based on following rules.          If there is no entity or project associated with activity → Activity Visible          If user has access to associated entity → Activity Visible          If user has access to the entity of associated project → Activity Visible          If user has no access to associated entity or entity of associated project → Activity Not Visible</p>	Resolved

	<p>Further the contacts of the activity being displayed also contains only from the entities which user has access too.</p> <p>The entity of the activity is displayed without any restriction. In the case #3, though user has access to project entity, no access to the activity entity. In this scenario entity name will be displayed, however when entity link clicked, not allowed to view the entity.</p>	
67	<b>Users where encountering a message in iChannelDesk were no files found when opening the Open window.</b>	<b>Resolved</b>

## Client Detail: New Delete Entity button (System Admin Only)

Previously on the **Client Detail** page the **Delete** button to remove a client from iChannel was located on the *menu of action buttons*. The new **Delete Entity** button is now located on the **Detail** tab.

- The **Delete Entity** feature is controlled by *iChannel Security*

## File Area – Unable to Delete Multiple Documents in One Action

System Administrators or an Identified User at your organization will have the responsibility to clean up the File Area with documents that have been **Marked for Deletion**. Previously, iChannel was limited to the number of documents that could be deleted at once using the Delete feature.

To improve the User's experience, there is no limited to the number of documents that can be Delete when documents are identified as Marked for Deletion.

## Session Validation – Web API Request (System Admin Only)

iChannel now validates all public Web Service Endpoints and will block any unauthenticated requests coming in.

This is a *new Security Feature* within iChannel.

## Custom Notification Emails

*Previously*, emails that where generated in iChannel only had the ability to use **out-of-the-box non-customized email notification templates**. With this release, Clients can now request to implement **Customized Notification Emails**.

*Currently*, iChannel supports the following notification templates for customization:

- File Added to Portal
- Password Change
- Welcome to Portal

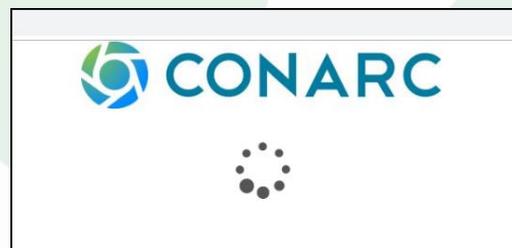

To request the use of Customized Notification Emails, please *contact* [Conarc Support](#).

## iChannel Splash Page

In early releases of iChannel before a User was able to access the Login Page, iChannel would initiate or load a **Splash Page** where items (targets) would load individually. This instance would add additional loading time to the application before the webpage (Login Page) would completely display.

This intermediate step (Splash process) is no longer needed or required. To improve the Users site experience, iChannel has implemented a responsive loading icon or image (spinning icon) while the webpage is loading to provide enough time for all targets and components to completely load.

## Security Groups – New Security Permissions

You might have individuals outside of your organization or even within your own organization where you want to ensure a strict **Security Policy** on “*who*” and “*what*” those individuals can search and/or view. *Previously*, many Security Rules (Security Groups)

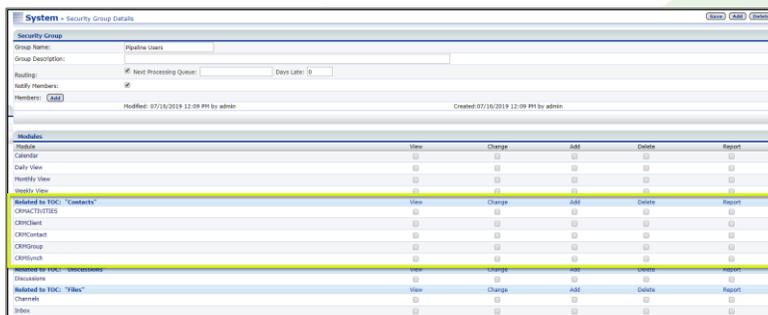

have only applied to accessing documents. A new enhancement is now in place to extend iChannel Security Rules (Security Groups) to also include:

- **Contact Search** – filter contact search result
- **Entity Search** – filter entity search result
- **Group/List Page Search** – restricts the user list
- **Project Search** – filter Projects results from the Project Search screen
- **Global Search** – restricts Global Search results
- **Dashboard Widgets** – restricts Widget data
- **In-direct Contact | Entity Display Areas**

To access and set the proper security permissions by **Security Group**:

1. Click **System** from the banner.
2. Click **Subscribers** from the navigation list
3. Select a **Subscriber** from the list
4. In the **Group Membership** area, review what groups the Subscriber is a part of. In the **Group Membership** area, Click on the **Security Group** name.
5. In the **Related to TOC: Contacts**, ensure the Subscriber permission are set to ensure rather of not the Subscriber can perform search in the Contact Filter Search.

## Contacts Search – Filter Entity Search

A new enhancement on how a System Administrator or End Users can perform a search in the Available Contacts list in the Entity Search fields. The list of Available Contacts is now based on User’s Security Group profile.

Additional areas where this new Security Enhancement effects:

- **Activity | Contacts** add & edit
- **Discussions | Contacts** for add & edit when sending an email
- **Projects | Contacts** for assigning the Primary or Secondary contact(s)
